

Nero

The Cash Flow Accelerator

Your ledger tells you what you're owed. Nero tells you when the cash actually arrives — and acts to bring it forward.

THE PROBLEM

Charts track money. They don't get you paid.

Due dates are fiction. A small business sees what's **due** — not when cash **actually** lands. So they hit cash crunches they could have prevented.

DUE NEXT 30 DAYS

£18,000

what the ledger shows

ACTUALLY ARRIVING

£9,000

once you price in late payers

THE GAP

£9,000

invisible until it's a crisis

See the real cash picture

Reads your Xero ledger

Contacts, invoices and payment history — no manual entry.

Predicts real payment dates

Each customer's own behaviour, not the due date.

Forecasts against a floor

Flags the exact week cash dips below your minimum.

An agent that acts — you stay in control

Nero proposes the specific moves — **chase this invoice, ask a deposit there, tighten terms** — each tagged with the £ it brings forward. **You approve; nothing sends automatically.**

£13,000 ready to bring forward

~12 days sooner, across 7 approval-gated actions

Apex Corp

Often Late

What they currently owe you

£5,600

How much business you've done with them (past year)

£170,000

Based on 11 paid invoices, Apex Corp pays on average 22 days late, and that's been steady.

Open statement

Accountable by design, built the Xero way

Built the Xero way

- Live OAuth to a Xero organisation
- Reads contacts, invoices, payments + online invoice links (Accounting API)
- Approved reminders write a history
- note back to the invoice in Xero

Accountable by design

- Every action is approval-gated
- Reasoning shown, grounded in real stats
- Nothing sends automatically
- "Cash Accelerated £" = measurable outcome

Validated demand

- Payment-performance report: 351 forum votes
- Deposits on invoices: 507 votes
- ...both unbuilt by Xero today
- Chases + forecasts in one loop (nobody else)

What's next: outcome learning · SMS / multi-channel reminders · multi-client advisor view
